European Patent Office Confirms Validity of XenaDeck Patent

Xena Systems can announce that, following an opposition filed by Cantideck, the Opposition Division of the European Patent Office (EPO) has ruled that its European patent EP 1392939 for the XenaDeck rolling platform is valid in amended form.

This positive decision by the EPO means that, even in its amended form, Xena Systems' patent EP 1392939 still covers XenaDeck platforms having a shorter fixed structure coupled with a longer moveable platform which is fully supported even when retracted beyond the fixed structure. This unique combination of features provides significant advantages during the build process as compared with competing products, particularly when space within the building is limited. The patent covers the following territories: the United Kingdom, Ireland, France and Germany and expires in 2022.

Xena Systems has full confidence in its intellectual property portfolio and will vigorously defend and enforce its intellectual property rights. This portfolio includes an additional patent application covering the LoadSwift system. Xena Systems is dedicated to the ongoing development and protection of innovative products with the aim of bringing its customers the best possible solutions for loading processes.

Any customers having questions or concerns arising from this announcement are encouraged to contact us directly
